*Patents are pending on several parts of the T-MEK game.*

## COPYRIGHT NOTICE

**Copyright © 1994 by Atari Games Corporation. All rights reserved.**

No part of this publication may be reproduced by any mechanical, photographic or electronic process, or in the form of a phonographic recording, nor may it be stored in a retrieval system, transmitted, or otherwise copied for public or private use, without permission from the publisher.

The game play, all graphic designs, this technical manual, its accompanying schematic diagrams, and the display manual are protected by the U.S. Copyright Act of 1976.

This Act provides for substantial penalties for violating federal copyright laws. Courts can impound infringing articles while legal action is pending. If infringers are convicted, courts can order destruction of the infringing articles.

In addition, the Act provides for payment of statutory damages of up to \$50,000 per infringing transaction in certain cases. Infringers may also have to pay costs and attorneys' fees and face an imprisonment of up to five years as well as fines of up to \$250,000 in the case of individuals and up to \$500,000 in the case of corporations.

Atari Games Corporation will aggressively enforce its copyrights against infringers. We will use all legal means to immediately halt any manufacture, distribution, or operation of a copy of video games made by us. Anyone who purchases such copies risks forfeiting such a game.

## NOTICE RE NON-ATARI PARTS

### WARNING

*Use of non-Atari parts or modifications of any Atari game circuitry may adversely affect the safety of your game, and may cause injury to you and your players.*

You may void the game warranty (printed on the inside back cover of this manual) if you do any of the following:

- Substitute non-Atari parts in the game.
- Modify or alter any circuits in the game by using kits or parts *not* supplied by Atari Games Corporation.

## FCC COMPLIANCE

This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of Federal Communications Commission (FCC) Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area or modification to this equipment is likely to cause interference, in which case the user, at his own expense, will be required to take whatever measures may be required to correct the interference. If you suspect interference from an Atari game at your location, check the following:

- All ground wires in the game are properly connected as shown in the game wiring diagram.
- The power cord is properly plugged into a grounded three-wire outlet.
- On games provided with an Electromagnetic Interference (EMI) ground plane, be sure that the game printed-circuit boards (PCBs) are properly installed on the EMI ground plane and that the end board is securely installed with **all** screws in place and tightened.

If you are still unable to solve the interference problem, please contact Customer Service at Atari Games Corporation. See the inside front cover of this manual for service in your area.

## S A F E T Y   S U M M A R Y

*The following safety precautions apply to all game operators and service personnel. Specific warnings and cautions will be found in this manual whenever they apply.*

### WARNING

**Properly Ground the Game.** Players may receive an electrical shock if this game is not properly grounded! To avoid electrical shock, do not plug in the game until it has been inspected and properly grounded. This game should only be plugged into a grounded three-wire outlet. If you have only a two-wire outlet, we recommend you hire a licensed electrician to install a three-wire grounded outlet.

**AC Power Connection.** Before you plug in the game, be sure that the game's power supply can accept the AC line voltage in your location. The line voltage requirements are listed in the first chapter of this manual.

**Disconnect Power During Repairs.** To avoid electrical shock, disconnect the game from the AC power before removing or repairing any part of the game. If you remove or repair the video display, be very careful to avoid electrical shock. High voltages continue to exist even after power is disconnected in the display circuitry and the cathode-ray tubes (CRTs). Do not touch the internal parts of the display with your hands or with metal objects! Always discharge the high voltage from the CRTs before servicing them. Do this after you disconnect them from the power source. First, attach one end of a large, well-insulated, 18-gauge jumper wire to ground. Then momentarily touch the free end of the grounded jumper wire to the CRT anode by sliding the wire under the anode cap. Wait two minutes and do this again.

**Use Only Atari Parts.** To maintain the safety of your Atari game, use only Atari parts when you repair it. Using non-Atari parts or modifying the game circuitry may be dangerous, and could injure you and your players.

**Handle the CRTs With Care.** If you drop a CRT and it breaks, it may implode! Shattered glass from the implosion can fly six feet or more.

**Use the Proper Fuses.** To avoid electrical shock, use replacement fuses which are specified in the parts list for this game. Replacement fuses must match those replaced in fuse type, voltage rating, and current rating. In addition, the fuse cover must be in place during game operation.

### CAUTION

**Properly Attach All Connectors.** Make sure that the connectors on each printed circuit board (PCB) are properly plugged in. The connectors are keyed to fit only one way. If they do not slip on easily, do not force them. If you reverse a connector, it may damage your game and void your warranty.

**Ensure the Proper AC Line Frequency.** Video games manufactured for operation on 60 Hz line power (used in the United States) must not be operated in countries with 50 Hz line power (used in Europe). If a 60 Hz machine operates on 50 Hz line power, the fluorescent line ballast transformer will overheat and cause a potential fire hazard. Check the product identification label on your machine for the line frequency required.

### ABOUT NOTES, CAUTIONS, AND WARNINGS

In Atari publications, notes, cautions and warnings have the following meaning:

**NOTE** — A highlighted piece of information.

**CAUTION** — Equipment and/or parts can be damaged or destroyed if instructions are not followed. You will void the warranty on Atari printed-circuit boards, parts thereon, and video displays if equipment or parts are damaged or destroyed due to failure of following instructions.

**WARNING** — Players and/or technicians can be killed or injured if instructions are not followed.

# NOTES

# Set-Up

## How to Use This Manual

**T**HIS MANUAL IS written for operators and service personnel. It provides information for setting up, playing, testing, and maintaining your T-MEK™ game.

T-MEK is a one- or two-player futuristic arena battle game that allows players full navigational control. To maximize earnings, you can link two or three cabinets together so that as many as six players can compete in arena battles. To do so, a separate tournament play link kit is available from your authorized Atari distributor.

Chapter 1 of this manual contains set-up and game play information. ♦ Chapter 2 contains a description of the self-test procedures and option settings. The self-test is important

in the T-MEK game. You can troubleshoot the printed-circuit boards (PCBs), main circuits, and controls using the screens in the self-test.

You should regularly test the boards and controls with the self-test to keep your game in peak condition and at top earnings.

Chapter 3 contains several troubleshooting tables, plus maintenance and repair procedures for the game components. If you have problems with your game, use this chapter to troubleshoot and repair it. Be sure to

perform the preventive maintenance tasks to keep your game in good condition. ♦ Chapter 4 contains the illustrations and PCB parts lists. ♦ Chapter 5 contains the schematics for all the PCBs and all the wiring diagrams.

## Operating the Game

To operate your game for maximum income, you should regularly run the self-test and check the controls with the Control Test and Sound Test in the self-test. By using the self-test regularly, you can find and fix problems immediately. This lets you keep your game in top condition.

## Inspecting the Game

### WARNING

*To avoid electrical shock, do not plug in the cabinet until it has been properly inspected and set up for the line voltage in your area.*

This cabinet should be connected to a grounded three-wire outlet only. If you have only two-wire outlets, we recommend that you hire a licensed electrician to install grounded outlets. Players can receive an electrical shock if the cabinet is not properly grounded.

Make note of the power consumption when you set up this game, so that you do not overload your electrical circuit. See Table 1-1 for the power consumption and the other important specifications of this game.

Inspect your T-MEK game carefully to ensure that the game is complete and was delivered to you in good condition. Inspect the cabinet and seat as follows:

1. Examine the exterior of the cabinet for dents, chips, or broken parts.
2. Open the lower rear access panels. Unlock and open the coin doors. Inspect the interior of the cabinet as follows:
  - a. Check that all plug-in connectors on the cabinet harnesses are firmly plugged in. Do not force connectors together. The connectors are keyed so they fit only in the proper orientation. A reversed connector can damage a printed-circuit board (PCB). This will void your warranty.
  - b. Ensure that all plug-in integrated circuits on each PCB are firmly plugged into their sockets.
  - c. Inspect the power cord for any cuts or dents in the insulation.
  - d. Inspect the power supply. Make sure that the correct fuses are installed. Check that the harness is plugged in correctly. Check that the green ground wires are connected.

Characteristic	Specification
<b>Input Current</b>	4 Amps at 120 V
<b>Line Fuse Rating</b>	6.25 Amps at 120 V, slow blow
<b>Line Voltage</b>	102 to 132 VAC
<b>Temperature</b>	5° to 38° C (37° to 100° F)
<b>Humidity</b>	Not to exceed 95% relative
<b>Width</b>	53 inches (134.6 cm)
<b>Depth</b>	34.5 inches (87.6 cm)
<b>Height*</b>	74 inches (188 cm)
<b>Weight</b>	580 lbs. (263 kg)

\*Including the wood attraction-sign housing

**Table 1-1 Game Specifications**

- e. Inspect other sub-assemblies, such as the video displays, controls, printed-circuit boards, and speakers. Make sure that they are mounted securely and that the ground wires are connected.

## Control and Switch Locations

All of the controls are located on the back of the cabinet or behind the coin doors (see Figure 1-1). The following describes the locations in more detail:

### Power On/Off Switch

The power on/off switch is located on the bottom of the monitor cabinet rear panel.

### Volume Control

There is no volume adjustment knob on any PCB in this game. Instead, volume is separately adjusted in the self-test for each side. The attract-mode and game-play volumes can be adjusted separately. Refer to Chapter 2 of this manual for more information.

### Self-Test Switch

There is one self-test switch, mounted on a bracket behind the coin door. This self-test switch controls both screens.

Although there is an additional self-test switch located on each GT (game) PCB, for convenience we recommend that you use the coin door self-test switch.

**Figure 1-1 Main Control and Switch Locations**

### Coin Counters

The two coin counters are located above the coin box, inside the coin door.

### Video Display Controls

This game provides convenient access to six of the most important video display controls — vertical and horizontal position, vertical hold, vertical size, black level, and contrast. These control knobs are on small PCBs that are mounted on the plywood panel inside each coin door (see Figure 1-1).

## Installing the Attraction Assembly

### **WARNING**

*The attraction assembly weighs about 45 lbs. To prevent injuries, we recommend you have another person help you lift the assembly onto the top of the game cabinet.*

1. Unwrap the protective covering on attraction assembly.
2. Reach into the small slit near the center of the top surface of the game cabinet. Tie-wrapped inside this opening is the attraction light harness. Pull out the harness.
3. Make sure the mate to this harness (inside the attraction assembly) protrudes from the assembly. If the connector is inside the attraction assembly, you will have to remove the six black screws that secure the attraction shield. Then shove the fluorescent light connector through the slit in the attraction assembly.
4. With a helper, hold the attraction assembly slightly above the top of the game cabinet. Plug the fluorescent light harness connectors together. Then carefully lower the attraction assembly onto the top of the game, *making sure you do not pinch any wires*.
5. Insert the four tamperproof screws and flat washers into the holes provided in the open rear area behind the attraction light.

## Joining the Two Cabinet Halves Together

Make sure the game power is turned off. To join the separately packaged seat assembly to the cabinet, you need a hex driver or wrench. Follow these steps to attach the seat assembly onto the game:

1. Using the wood screws provided, attach the divider panel to the center of the seat assembly (through the black L-brackets). See Figure 4-1.
2. Reach in through the rectangular front openings at the bottom center of the game. Pull out both sets of harnesses.
3. Move the seat assembly near to the front of the game cabinet. Plug the harnesses into the corresponding jacks on the seat assembly.
4. Slightly raise the unattached end of the divider panel as you move the seat assembly up flush to the game, being careful not to pinch any excess harness wires. Adjust the glides to match the seat platform height with the cabinet height.
5. Loosely place one seat/cabinet brace on each side of the cabinet — they are mirror images of each other. Install four flat washers and tamperproof screws into the four holes provided on each side. As you tighten the screws, press each bracket firmly against the sides of the seat assembly and cabinet.

## Setting the Coin and Game Options

The T-MEK coin and game options are set in the self-test. Refer to Chapter 2 for the recommended settings and the procedure for setting the options.

## Installing the Optional Cabinet Link Kit

An optional T-MEK link kit is available from your distributor for a nominal fee. This kit includes a wood sign with graphics, support rods, brackets, a link cable, and other hardware. The cabinet has predrilled holes for the support rods.

This kit was designed to be installed in your choice of three cabinet positions, to allow flexibility in fitting two linked T-MEK cabinets into your location. For installation instructions on this link kit, refer to the supplement CO-394-01, which is included with the kit.

## Game Play

This section describes the features and play of the T-MEK game.

### Introduction

Take the T-MEK Tournament Challenge! T-MEK is a vehicular combative fighting simulator that provides an insanely interactive, in your face, fight for survival or supremacy. The ultimate objective is to become champion of the T-MEK Tournament. This is no easy task, for it ultimately requires defeating Nazrac the Eliminator, the supreme T-MEK Warrior and sponsor of the tournament.

The tournament consists of a series of dark and challenging arena battles. Each battle pits four T-MEK Warriors in head-to-head competition. In addition to fighting other T-MEK Warriors, players also have to contend with deadly alien drones and arena bosses. The arenas also have hidden special weapons.

T-MEK is a deluxe sit-down with custom analog controls and Atari's new CAGE audio system. Each two-player game cabinet can link two players in head-to-head play as well as permit solo play for lone players. Up to three cabinets can be linked for six-way head-to-head action.

**Total Immersion Audio**

### Game Play

The game offers two playing modes:

- Solo — A tournament ladder climb. Players must finish first in each arena battle in order to progress up all 12 rungs of the tournament ladder. All rungs have arena opponents, while six have boss characters that must be pummeled to death.
- Head-to-Head — A competitive rank challenge. All join-in players force a head-to-head situation with the incumbent player. While in this mode, progression up the ladder is suspended until a player opts

not to reenter the fray. The remaining player continues the ladder climb.

## The T-MEK Tournament

The object of T-MEK is to prove one's superiority against all challengers, rising through Nazrac's tournament ladder until one meets the supreme T-MEK Warrior — Nazrac, The Eliminator.

In a T-MEK match, the player enters one of six exotic arenas with three other T-MEK warriors. Points are scored by hitting and destroying other MEKs with the blasters, plasma cannons, and specialized weapons available to the player. When a player's MEK is ravaged and explodes, the pilot automatically ejects, grabs a backup MEK, and jumps back into battle. When the match time runs out and the twisted wreckage slides to a stop, Nazrac declares the player with the most points the winner. The battle's winner continues in the tournament for free; the losers must pay a re-entry fee to continue in the competition.

If you defeat a higher ranking player, you acquire that player's rank in the tournament. As you progress up the ladder you are pitted against the boss of each arena who are special underlings to Nazrac. Unlike other rung battles, these fights are to the death! If you defeat the arena boss, you replace him, her, or IT as the ruler of that arena and the planet it lies on.

### MEKs

Before each match, the player must choose a MEK to take into battle. Each MEK has distinctive speed, shield, and weapon characteristics as well as completely unique special weapons and defenses. The player has six MEKs to choose from: SpeedMEK, StealthMEK, AssaultMEK, HyperMEK, LurkerMEK, and SuicideMEK.

### Arenas

There are six fantastic arenas, each with unique graphics and dimensions of game play: blistering Sun's Anvil, electrifying Storm Rift, hellish Inferno, maze-like Stone Web, claustrophobic Alien Nest, and Nazrac's Killing Floor! While in head-to-head mode, arena selection is reserved for the battle winners.

### Controls, Weapons and Defenses

The two control sticks move the MEK through the arena. Since MEKs hover above the ground, they may slide left and right as well as forward and back. By pushing one stick forward or back, the MEK travels in a curve. By pushing one stick forward and one stick back, it spins in place. Pushing the stick a small distance causes a small acceleration, while a harder push moves it faster.

The right trigger fires long-range plasma cannons. The glowing hot plasma does heavy damage to MEKs and arena structures. Plasma shots automatically curve to track the player registered in the lock-on cursor. The left trigger fires two short-range blasters. Blasters fire rapidly, but do not travel far before gouging into the ground. An individual blaster hit does light damage, but their cumulative effect is deadly. Both plasma cannons and blasters may be fired with no limitation.

Each MEK has a different set of special weapons that are fired by the right thumb button. To fire a special weapon, you must have at least one offense power-up (shown on the right side of the control panel). To get more offense power-ups, the player must go through the blue light beaming down from underneath the floating reload platforms.

Holding down the left thumb button activates the MEK's defensive system. The defense varies from MEK to MEK, but all have the same basic effect, making the MEK impervious to weapons. The defensive charge is measured on the left side of the control panel. When this charge runs out, the defense will no longer work. When the defense is not active, the charge slowly builds up. As an added benefit, while the defense is active the MEK can turn faster than usual. However, as long as the defense is active, conventional weapons will not work.

## MEK Targeting Systems

Each MEK has several systems to help track and target opponents. Player's are color-coded. The right-hand screen in the control panel shows who is in the lead. The color of that player's name matches the color of the radar dot showing the position of that lead player's MEK, which also matches the color of the glow of that player's engines on-screen.

When another MEK is in the targeting sights, the weapon systems automatically lock on to that competitor — a secondary target bracket follows that MEK. When locked on, information about that MEK appears near the central target sight: the opponent's name written in that player's color, and the point value for that player. The darker the color of the opponent's name, the less shield power that MEK has. The plasma cannon and some special weapons will automatically home in on whoever the system is locked onto.

**Control Panel**

The small screen in the right part of the control panel shows the current rankings of all players in the match, sorted by the points they have earned. The small screen in the left part of the control panel shows the player's current score and the time remaining in the match.

The radar is in the center of the control panel and is a top-down view with the player at the center. The large colored dots represent the color-coded opponents. Dots at the top of the circle represent MEKs in front of you; dots in the right part of the circle are MEKs to your right, and so on. The moment-to-moment relative position of these dots is not fully accurate and may jump around since opponents' MEKs resist detection. MEKs with high defense ratings are more difficult to track on your radar. The LurkerMEK is nearly impossible to pin down.

**Shields**

The bar at the top of the screen represents the remaining shield power. If the shields are gone and your MEK

suffers additional damage, your MEK explodes. You lose precious seconds and points before you re-enter the battle in a new MEK — and in fights to the death against arena bosses, lose your last hope of survival!

**Scoring Tips**

When locked onto a MEK, under the name of the MEK's pilot, a "kill bonus" — how many points you would get for destroying that MEK, is displayed. A "confirmed kill" report appears when you get this bonus. In addition, when you damage a MEK you get a fraction of that kill bonus, proportional to the amount of damage you did. If an opponent's kill bonus is 40,000, for example, you get 10% of that, or 4,000 points, for hitting that MEK with your plasma cannon. A

MEK's kill bonus is not always the same.

In fact, the kill bonus for a player depends on that player's current ranking. A player who at the moment is in first place has a kill bonus of 80,000 points. A player who is currently in last place has a kill bonus of merely 20,000 points. Therefore, to maximize points, go after the higher-ranked players! When your MEK is destroyed, Nazrac deducts a fraction of your points.

# Self-Test

## Introduction

USE THE T-MEK™ self-test to check the condition of the game circuitry and controls. You will see the self-test information on the video display and hear the sound test information through the speakers. You do not need any additional equipment to perform the self-test. Perform

the self-test when you first set up the game, each time you collect the money, or when you suspect game problems. This chapter shows the screens in the self-test and explains each of the

tests. The screens and explanations are arranged in the order they appear in the self-test. Table 2-1 lists all the self-test screens.

# Entering and Exiting the Self-Test

The game's self-test switch is located behind the coin door. Turning it on causes both screens to enter the self-test mode. Doing so displays the Select Test menu; see Figure 2-1. Exit the self-test by turning off the self-test switch at any time. Once in the self-test mode, both video displays act independently: each is controlled by its own joystick controls.

**Table 2-1 Summary of All Self-Test Screens**

At the bottom of the self-test screens you may find that the MOS or OS versions shown in this manual are different from your game. Any version differences in the software are unimportant.

## Select Test Menu

Choose which test or screen you want to see from this menu, shown in Figure 2-1. Both video displays show the same full self-test, because each player station has a full set of electronic hardware.

Move up and down the menu by moving the right joystick forward or backward (or by pressing the thumb button). Start the selected test by pressing the trigger button.

**Figure 2-1 Select Test Menu Screen**

## Adjust Volume

Adjust the volume of the game using this screen, shown in Figure 2-2. Follow the instructions at the bottom of the screen to change the volume, to restore the old volume level, and to save the new volume and return to the select test menu.

The software continuously plays music to allow you to adjust both the game and attract-mode volume levels. The word *GAME* or *ATTRACT* flashes to show which of the two volumes levels you are adjusting. Move the joystick up or down to select either one. The attract-mode volume level has four steps: mute, 1/3, 2/3 or full volume level (these are fractions of the game volume level).

Figure 2-2 Adjust Volume Screen

## Statistics

Use the information shown in the statistics and histogram (bar graph) screens to keep track of your game use and maximize your profits.

The game statistics are collected from the last time the statistics were cleared. Follow the instructions at the bottom of the screen to clear the statistics or to advance to the next statistics or histogram screen.

### Statistics Screen

The statistics screen (see Figure 2-3) lists the following information:

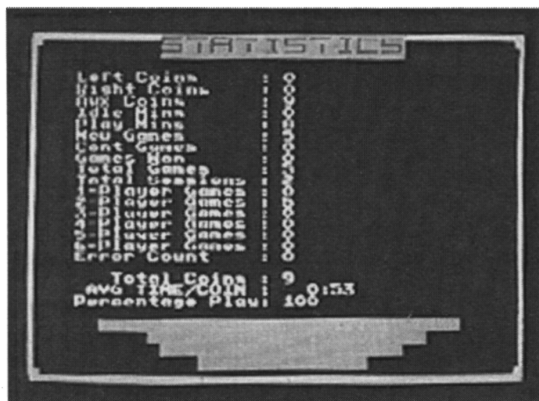

Figure 2-3 Statistics Screen

- Left Coins shows the number of coins counted in the left coin mechanism.
- Right Coins shows the number of coins counted in the right coin mechanism.

- Aux Coins shows the number of coins manually added by the operator. (not inserted into any mechanism).
- Idle Minutes shows the number of minutes that the game was idle and not being played.
- Play Minutes shows the number of minutes that the game was being played.
- New Games shows the number of unique games played. A unique game is counted every time a player starts a new game (not a continued game).
- Continued Games shows the number of games that players continued.
- Games Won shows the number of waves in which the player has ranked in first place.
- Total Games shows total waves completed.
- Total Sessions shows total games completed.
- 1-Player Minutes/2-Player Minutes shows the number of minutes that the game was played by one or two players.
- 3-Player Minutes through 6-Player Minutes shows the number of minutes that the game was played by that many players (valid only if two or three cabinets are linked together).
- Error Count shows the number of errors counted in the erasable memory. If you have an error count, the statistics may be wrong. If you consistently have errors counted for several weeks, replace the EEROM at 22H on the T-MEK game PCB.

### Histogram Screens

The histograms screen is a menu that lets you display one of three screens (see Figure 2-4). These show various horizontal bar graphs for session length, highest tournament level, and AI (artificial intelligence) rank in linked games.

Figure 2-4 Histograms Menu

Option	Available Settings	Explanation
<b>Clear High Score Table Now</b>	Yes                      No ✓	Clears the high score table the next time you select the game mode.
<b>Auto-Clear High Scores</b>	Yes ✓                      No	Automatically clears the high score table periodically.
<b>Station ID</b>	Red (Left) A Blue (Right) B Yellow (Left) C Purple (Right) D Green (Left) E Orange (Right) F	Set each screen to a different color, as shown in Figure 2-6.
<b>Game Time (in Seconds)</b>	60, 70, 80 ✓, 90, 100, 110, 120, Infinite	Determines how much time is granted whenever a game is started.
<b>Difficulty Setting</b>	Easiest ... Medium ✓ ... Hardest	Provides a choice of five levels of game difficulty.

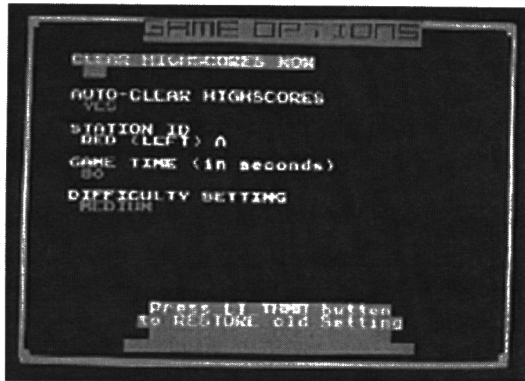

✓ *Manufacturer's recommended settings*

**Table 2-2 Game Option Settings**

## Game Options

Check and select the game options on this screen, shown in Figure 2-5. The screen shows the factory default settings in green.

To move through the options, to change or save the settings, or to return to the select test menu, follow the instructions shown at the bottom of the screen. The game options, with defaults, are shown and explained in Table 2-2.

**Figure 2-5 Game Options Screen**

**Figure 2-6 Configurations of Linked Games**

## Coin Options

Check and select the coin options on this screen, shown in Figure 2-7. The screen shows the factory default settings in green.

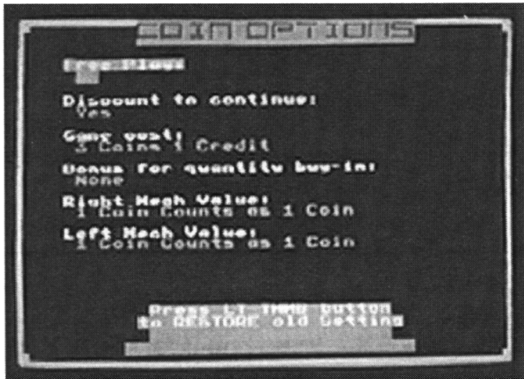

Figure 2-7 Coin Options Screen

To move through the options, to change or save the settings, or to return to the select test menu, follow the instructions shown at the bottom of the screen. The

coin option settings, with defaults, are shown and explained in Table 2-3.

## Tournament Options

Check and select the tournament options on this screen, shown in Figure 2-8. The screen shows the factory default settings in green.

Figure 2-8 Tournament Options Screen

Option	Available Settings	Explanation
<b>Free Play</b>	No ✓ Yes	Lets you choose free play to demonstrate the game.
<b>Discount to Continue</b>	No Yes ✓	When set to Yes, this option reduces by 50% the player's cost to continue a game (always rounded up to the next full coin).
<b>Game Cost</b>	1 coin 1 credit 2 coins 1 credit ✓ ... 8 coins 1 credit	The number of coins required for one credit.
<b>Bonus for Quantity Buy-in</b>	None ✓ 2 coins give 1 3 coins give 1 3 coins give 2 4 coins give 1 ... 9 coins give 2 9 coins give 3	Lets you choose from various kinds of bonuses or no bonus.
<b>Right Mech Value</b>	1 coin counts as 1 coin ✓ 1 coin counts as 2 coins ... 1 coin counts as 7 coins 1 coin counts as 8 coins	The number of coins each coin counts as in the right coin mechanism.
<b>Left Mech Value</b>	1 coin counts as 1 coin ✓ 1 coin counts as 2 coins ... 1 coin counts as 7 coins 1 coin counts as 8 coins	The number of coins each coin counts as in the left coin mechanism.

✓ *Manufacturer's recommended settings*

Table 2-3 Coin Option Settings

Note that on this menu, if you have set the tournament mode to ON, this menu's game time *overrides* the setting on the Game Options menu game time.

**NOTE**

*For normal everyday game play, be sure to keep the tournament mode in the OFF position.*

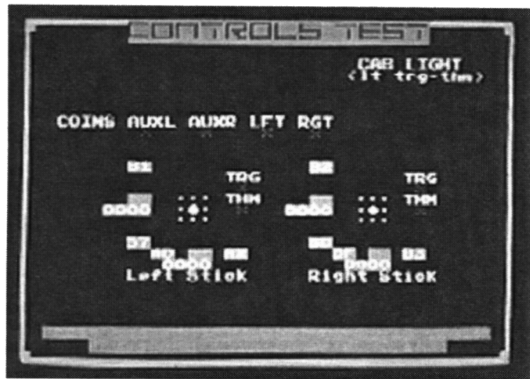

To move through the options, to change or save the settings, or to return to the select test menu, follow the instructions shown at the bottom of the screen.

## Controls Test

The controls test screen is shown in Figure 2-9. This test checks all the pushbutton switches, the joystick potentiometers, and the cabinet light above the monitor.

As you use each control, the numbers for the joystick pots increase or decrease, or the red Xs for switches become 0s. If the changes do not appear on the screen, check the controls and their wiring.

To reset the joystick pot limits, to change or save the settings, or to return to the select test menu, follow the instructions shown at the bottom of the screen.

**Figure 2-9 Controls Test Screen**

Press and *hold* the right thumb button to exit from the controls test.

## Sound Tests

Use this selection screen, shown in Figure 2-10, to determine the condition of the sound effects circuit on the game PCB.

**NOTE**

*The audio boards must be installed and connected in the game to perform this test.*

**Figure 2-10 Sound Tests Screen**

To check the audio ROMs, run the Audio Checksums test. To determine if all five speakers are working properly, select the Speaker Test.

In the Audio Checksums test, verify that all the checksums are displayed in white. If any of them show red numbers, you have a problem with the circuitry or ROMs. If all ROMs are bad, suspect the circuitry. If a single checksum is bad, check for improper ROM seating.

In the Speaker Test (see Figure 2-11), move the right joystick to all four diagonal corners. After doing so, at each corner you should hear a voice coming from the corresponding speaker, saying "Left Front" or "Right Rear", for example.

**Figure 2-11 Speaker Test Screen**

## RAM (Memory) Tests

Use this selection screen, shown in Figure 2-12, to run any of the nine RAM tests. These tests check the RAM chips in various ways.

When you turn on the power, the game automatically runs through the random-access memory (RAM) tests. Refer to Chapter 3 of this manual for more details.

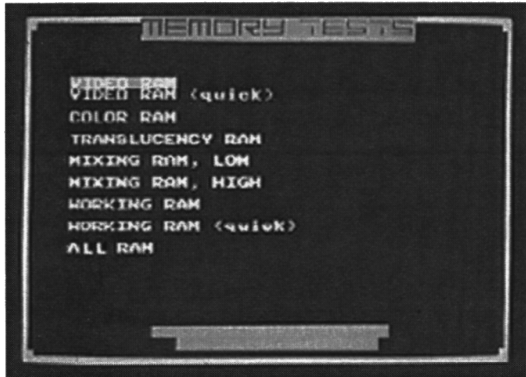

Figure 2-12 Memory Tests Screen

## ROM Test

This screen displays any ROM errors by showing a non-zero number after a particular item. A properly working board should cause your screen to display only 0s in the right column.

If a ROM fails, a message may be displayed. However, depending on how bad the ROM error is, you may not be able to enter the self-test.

If you have a ROM error, check the four ROMs labeled PGM\_LL, PGM\_LM, PGM\_UM, and PGM\_UU at 24L through 29L on the T-MEK game PCB. Check these locations for bent pins or incorrectly inserted chips. Also see Table 3-2 for information about the locations of the ROMs and their functions.

## Video Tests

Use this selection screen, shown in Figure 2-13, to determine the condition of the video circuitry on the game PCB.

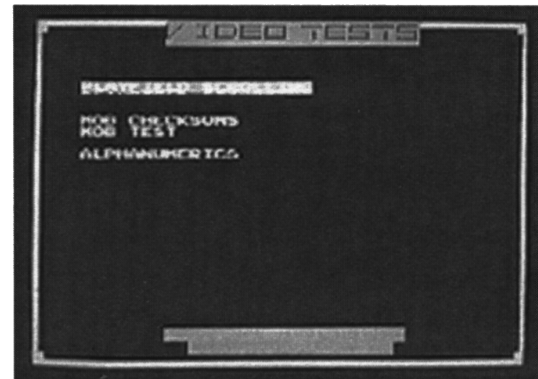

Figure 2-13 Video Test Selection Screen

## Playfield Scrolling

The playfield scrolling test is shown in Figure 2-14. To scroll the playfield continuously in a horizontal or vertical direction, move the joystick in the corresponding direction. Make sure that the playfield screen is clean and scrolls smoothly across the screen.

If the screen image does not move, or appears different from Figure 2-14, you have a problem in the playfield circuitry at locations 25N–28N on the T-MEK game PCB. To return to the select test menu, follow the instructions shown at the bottom of the screen.

Figure 2-14 Playfield Scrolling Screen

## MOB (Moving Objects) Checksums

The first MOB test screen, shown in Figure 2-15, examines the checksums of the MOB ROMs. If the checksums match, you should see the white numbers displayed as shown in Figure 2-15.

The eight designations listed in the left column on the screen (MOH0/MOL0 through 8) are the labels on the chips. If the checksums do not match, either you have a defective EPROM/ROM or a chip may be installed incorrectly.

Each screen should show no unevenness of color and no lines in the display.

Figure 2-19 Purity Test Screen

### Convergence Test

The convergence test has three screens — white, violet, and green backgrounds with grid lines. This sequence is then repeated but without any text on the screen. The white screen is shown in Figure 2-20. To see the remaining screens, press the trigger button. Press the thumb button to go to the select test menu.

Figure 2-20 Convergence Test Screen

Check the following on the screens:

- The grid lines should be straight within 3.0 mm and the lines should not pincushion or barrel.
- The convergence of the lines on the violet and black screens should be within 2.0 mm.

If these screens do not meet these criteria, adjust the video display as described in the video display manual.

Return to the select test menu by pressing the thumb button.

## Link Test

The link test checks the link between two or three T-MEK games and even within a game cabinet. Refer to the supplement CO-394-02 that describes this test in more detail.

### NOTE

*A link problem can remain hidden and unsolved if you do not check all linked player stations.*

Causes of errors could be problems with the cable, terminators installed incorrectly, harnesses, or connectors.

**N O T E S**

# Troubleshooting & Maintenance

## Introduction

**T**HIS CHAPTER contains maintenance, troubleshooting and repair procedures for your T-MEK™ game. The maintenance section gives information on cleaning the parts. The troubleshooting section contains several tables to help determine the source of a problem and the steps necessary to repair it. The repair section contains the steps necessary to remove and install the serviceable parts. Together, these three sections provide a complete guide to servicing your T-MEK™ game.

# Maintenance Procedures

## Introduction

This section describes the maintenance procedures for all of the major assemblies and components of the game. The maintenance procedures should be performed every 3–4 months on a regular basis.

### WARNING

Before performing any maintenance or repairs, please observe all of the following safety precautions:

1. Turn the game's power off.
2. Unplug the power cord from the electrical socket.
3. Secure loose clothing such as ties and long sleeves that could get caught within the game.
4. Remove all metal jewelry such as watches and necklaces that could conduct electricity from the game's power sources.

## Cleaning Procedure for Coin Mechanisms

Regular use of the coin mechanisms may result in a build-up of residue and dirt. If this is the case, clean the coin mechanism by following the steps below (refer to Figure 4-6 for detailed part information on the coin door).

1. Open the upper coin door.
2. Open the gate on the door that covers the magnet. Use the blade of a screwdriver to scrape away any metal filings that have collected on the magnet.
3. Clean the loose dust and dirt from the coin mechanism with a lint-free rag or a soft brush.
4. Clean the dirt and residue from the coin path with a toothbrush. Hot, soapy water may be used to help dissolve dirt and residue.
5. Blow out all the loose dirt and dry the coin mechanism with compressed air.
6. Close the gate on the door that covers the magnet and close the upper coin door.

### CAUTION

Never lubricate the coin mechanism with oil or grease.

# Troubleshooting Procedures

This section is designed to help determine the source of a malfunction and detailed information on repairing the problem.

*Table 3-1 General Troubleshooting*, is divided into two columns. The left-hand column is broken down into the general nature of problems. The right-hand column lists suggested solutions to solve the problem.

*Table 3-2 ROMs and RAMs Troubleshooting*, is designed to help determine the specific ROMs and RAMs that are the source of a game logic malfunction. The left-hand column shows some problems that may result from malfunctioning ROMs and RAMs. The middle column shows the ROMs and RAMs that may be the source of the problem and their purposes. The right-hand column shows the PCB locations of the ROMs and RAMs that may be causing the problem.

*Table 3-3 Voltage Inputs and Test Points*, is divided into three columns. The left-hand column shows the correct voltages that should be measured. The middle column shows the physical locations of the test points or LEDs. The right-hand column shows the sources and purposes of the voltages.

# Repair Procedures

## Introduction

This section describes the repair procedures for all of the major assemblies and components of the game. Before performing any repairs, use the tables in the *Troubleshooting Procedures* section to help narrow the source of the problem. The *Maintenance Procedures* section may also provide a good starting point for fixing many game problems before beginning what might be unnecessary repairs.

## Speakers

Each player has five speakers: the front right and left (above the monitor), the rear right and left (behind the player's head) and one under the seat. The speakers provide the music and sounds for the game and self-tests. Failure of the speakers may result in distorted or no sound. If this is the case, replace the speakers by following the removal and installation steps below.

1. Remove the four screws securing the speaker grille. Then remove the speaker mounting screws.
2. Disconnect the harness from the speaker.
3. Replace and reinstall the speaker in reverse order.

## Strip Lights

To replace the strip light bulbs, follow the removal and installation steps that follow.

1. Remove the plastic attraction panel at the top of the game cabinet by removing the retainers that secure it.
2. Unfasten the screws that retain the strip light brackets on top of the cabinet.
3. Lift the strip light bracket out of the slot on top of the cabinet and disconnect the harness to the PCB assembly.
4. Rotate the bulb 1/4 turn (90 degrees) in the lamp clips and remove it by pulling on the bulb.

## Pot Joysticks

The pot joystick and its handle are shown in Figure 4-4. If you want to repair the joystick control, disassemble it by removing it from the pedestal. The hardware that secures the joystick assembly to the pedestal is also listed in that figure.

## System Logic Assemblies

This section describes the repair and maintenance procedures for the major assemblies and components that are related to the system's logic and electronics, including the printed-circuit boards (PCBs) and the power supply. These components are housed in the bottom of the cabinet below the video display.

### T-MEK Game PCB Set

The T-MEK game PCB set (board stack) is responsible for the display graphics and game play. Failure of the game PCB set may result in erratic or no game play. If this is the case, repair or replace the game PCB set by following the removal and installation steps below.

1. Unlock the rear access panel of the cabinet and remove it.

2. Disconnect the harness connectors from the game PCB set. (There are 8 connectors in all.)
3. Unfasten the screw and spacer that secures the game PCB set to the cabinet. Remove the game PCB set and its attached cover (refer to Figure 4-7).

### CAUTION

*Before handling static-sensitive components, properly ground yourself to discharge buildup of static charges.*

4. Re-install the game PCB set by following the previous steps in the reverse order.

### Electronic Game Link

Each T-MEK game is linked internally. Link kits are available from your distributor to link two or three T-MEK game cabinets together for up to six-person play. Chapter 1, Installing the Optional Cabinet Link Kit, describes the kit in more detail.

There are two DB-9 female link connectors (terminators) installed on the link panel at the rear of the cabinet. To link a T-MEK cabinet to another, remove one terminator from each cabinet and plug in the link cable instead. See Figure 2-6 for an illustration of how to link 1, 2, and 3 cabinets together. Be sure to use the self-test software (Game Options screen) to set each player station to a unique station ID. See Chapter 2 for more details.

### Power Supply

The power supply is responsible for providing power to all of the game assemblies that require it. Failure of the power supply may result in erratic game play or no power at all. If this is the case, repair or replace the power supply assembly by following the steps below.

1. Unlock the rear access panel of the cabinet and remove it.
2. Disconnect the wiring harnesses from the power supply.

### WARNING

*The power supply can contain high voltages even after the power is turned off. To avoid injury, observe all of the safety precautions before working on the power supply. (Refer to the Introduction in the Maintenance Procedures section.)*

3. Unfasten the 4 screws that secure the power supply assembly to the cabinet, and remove the power supply assembly.

Problem	Suggested Action												
<b>Coin Mechanism Problem</b>	<ol style="list-style-type: none"> <li>1. Check the wiring connections to the coin mechanism.</li> <li>2. Check the voltage to the + side of the mechanism.</li> <li>3. Test the coin mechanism with the Controls Test screen in the self-test.</li> <li>4. Check the power distribution board fuses.</li> </ol>												
<b>Joystick Problem</b>	<ol style="list-style-type: none"> <li>1. Check the switches and potentiometers using the Controls Test in the self-test.</li> <li>2. Reset the limits on the joystick using the Controls Test in the self-test.</li> <li>3. Has the control been lubricated with the correct type of lubricant? If not, lubricate it as shown in Figure 4-4.</li> <li>4. Check the harnesses and connectors.</li> <li>5. If you took the control apart, have you reassembled it correctly?</li> <li>6. Make sure all the parts of the control are in good order. Repair or replace parts as needed.</li> </ol>												
<b>Sound Problem</b>	<ol style="list-style-type: none"> <li>1. Check the speaker volume setting; make sure the volume isn't zero!</li> <li>2. Check both parts of the Sound Test in the self-test.</li> <li>3. Check the voltage on the JXPWR connector.</li> <li>4. Check the connections from the Quad Amp PCB to the speakers.</li> <li>5. Check the audio ROMs' checksums in the Sound Test of the self-test procedure.</li> <li>6. Check the resistance of the speakers for 8 Ohms on the 4-inch speakers and 4 Ohms on the 8-inch woofer under the seat.</li> </ol>												
<b>Video Display Problem</b>	<table border="0"> <tr> <td data-bbox="154 1018 568 1333">Screen is dark</td> <td data-bbox="592 1018 1372 1333"> <ol style="list-style-type: none"> <li>1. **Table 3-1 General Troubleshooting**

Problem	Suggested Action
Convergence, purity or color problems	<ol style="list-style-type: none"> <li>1. Use the self-test mode to digitally adjust the video display.</li> <li>2. Use the adjustment procedures in your video display manual.</li> </ol>
Picture is not centered	<ol style="list-style-type: none"> <li>1. Use the centering procedures in your video display manual.</li> </ol>
<b>Electronic Game Link Problem</b>	
	<ol style="list-style-type: none"> <li>1. Check the harnesses and connections between all linked games.</li> <li>2. Check the terminators (which are <i>required</i>) on the link plate at the back of the cabinet.</li> </ol>

**Table 3-1 General Troubleshooting, Continued**

4. Re-install the power supply assembly by following the previous steps in the reverse order.

**ROMs/RAMs**

The ROMs and RAMs contain the programming routines used by the game PCB set to control game play. Refer to *Table 3-2 ROMs and RAMs Troubleshooting* to determine the ROMs or RAMs that are malfunctioning. Replace the damaged ROMs or RAMs by following the removal and installation steps below.

1. Remove the game PCB set according to the procedure in the *T-MEK Game PCB Set* section.

**CAUTION**

*Before handling static-sensitive components, properly ground yourself to discharge buildup of static charges.*

2. Remove the damaged ROMs and RAMs from the game PCB set using a chip extraction tool.
3. Install the new ROMs and RAMs by plugging them in the game PCB set sockets.

Problem	ROMs/RAMs Source and Purpose	Location
<b>ROMs</b>		
The program works, but the motion objects are incorrect or non-existent.	Motion Object ROMs and GALs (responsible for moving graphic objects)	1S, 11S-15S, 9T, 17P, 22U. Also, ROMs on rows V, W
Garbage appears on the screen or game play doesn't work correctly.	Program ROMs (responsible for game control)	24L-29L
The text or numbers are incorrect or non-existent.	Alphanumeric ROM (responsible for controlling graphic text and numbers)	22P/R
The sound is incorrect or non-existent.	Audio ROMs (responsible for controlling sound)	ROMs on Row 11 of Sound CH31 board.
The moving backgrounds graphics are incorrect or non-existent.	Playfield ROMs (responsible for controlling background graphics)	25N-28N
<b>RAMs</b>		
The display color is yellow.	Working RAM	
The display color is green.	Video RAM	
The display color is white.	Color RAM	

**Table 3-2 ROMs and RAMs Troubleshooting**

Voltage	Test Point or LED Location	Voltage Source and Purpose
+5 ± 0.25 VDC	+5V Low, 5V High	Logic power from the switching power supply.
-5 V	-VOP (pin 11 of LM324)	-5 V from the switching power supply (if connected).

**Table 3-3 Voltage Inputs and Test Points**

- Re-install the game PCB set by following the steps in the *T-MEK Game PCB Set* section in the reverse order.

## Video Display

To repair, replace or make adjustments to the video display, follow the removal and installation steps below.

### WARNING

#### High Voltage

*The video display contains lethal high voltages. To avoid injury, do not service this display until you observe all precautions necessary for working on high-voltage equipment.*

#### X-Radiation

*This video display is designed to minimize X-radiation. However, to avoid possible exposure to soft X-radiation, never modify the high-voltage circuitry.*

#### Implosion Hazard

*The cathode-ray tube (CRT) may implode if struck or dropped. The shattered glass from the tube may cause injury up to six feet away. Use care when handling the display and when removing it from the game cabinet. Also, wear gloves to protect your hands from the sheet-metal edges.*

- Unfasten the 8 square drive screws that secure the monitor doors to the cabinet and remove them.
- Discharge the high-voltage from the cathode-ray tube (CRT).

### NOTE

*The label on the video display assembly shows a circuit for discharging the high-voltage contained in the CRT to ground when the power is off.*

- Secure one end of a solid 18-gauge wire to a well-insulated or wooden handle screwdriver.

- Secure the other end of the wire to an earth ground.
  - Briefly touch the blade end of the screwdriver to the CRT anode by sliding it under the anode cap.
  - Wait 2 minutes and repeat the previous step.
- Disconnect all of the wire harnesses from the video display.
  - Unfasten the 13 square drive screws that secure the light housing assembly and remove it.
  - Unfasten the 10 square drive screws that secure the lower glass retainers. Remove the display shields and card-board bezels.
  - Unfasten the 4 flat washers and nuts that secure each video display chassis to the cabinet monitor mounting brackets.
  - Remove the video display assembly from the cabinet.

### NOTE

*Do not attempt to remove the video display without its chassis.*

- Install the new video display by following the previous steps (excluding steps 2a.-2d.) in the reverse order.
- If necessary, adjust the new video display's brightness, size, centering, purity and convergence according to the video display service manual.

## Part Ordering Information

**T**HIS CHAPTER provides information you need to order parts for your game. The printed-circuit board (PCB) parts lists are arranged in alphabetical order by component. Within each section the parts are arranged numerically by part number. When you order parts, give the part number, part name, the number of this manual, and the serial number of your game. With this information, we can fill your order rapidly and correctly. We hope this will create less downtime and more profit from your games. Atari Games Customer Service phone numbers are listed on the inside front cover of this manual.

#### Parts List

Designator	Description	Part No.	Designator	Description	Part No.
MOH_0-MOH_7, MOL_0-MOL_7	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R50-R53	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471
PF0H, PF0L, PF0M, PF1H, PF1L, PF1M	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R58-R68	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
PF6B, PF56B, PFR4M	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100	R69	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471
PGM_LL	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R70-R77	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
PGM_LM	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R78-R83	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
PGM_UM	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R84	Resistor, 4.7 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-472
PGM_UU	Socket, 32 Pin, .600, Dbl Wipe	179356-0632	R85-R97	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
Q1-Q3	Transistor, 2N3904	133041-001	R98-R109	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471
Q4, Q5	Transistor, 2N5306	133033-001	R124	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-101
R1	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R125	Resistor, 220 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-221
R2	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-101	R126, R127	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-101
R3	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R128	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
R4	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100	R131	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R4M1-R4M5, R4MP	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470	R133	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471
R5	Resistor, 15 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-150	R134	Resistor, 4.7 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-472
R6	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R136	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
R7	Resistor, 2.4 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-242	R137, R138	Resistor, 220 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-221
R7MA	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470	R147, R148	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470
R8	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-101	R149	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R9	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100	R150	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100
R10	Resistor, 15 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-150	R152	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R11	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R153	Resistor, 2.2 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-222
R12	Resistor, 2.4 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-242	R154	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
R13	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-101	R156-R158	Resistor, 100 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-472
R14	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100	R159	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R15	Resistor, 15 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-150	R160	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100
R16	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R161, R162	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R17	Resistor, 2.4 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-242	R163, R164	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100
R18	Resistor, 0 $\Omega$ , $\pm 5\%$ , 1/4 W	110005-001	R167	Resistor, 510 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-510
R19, R20	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R169	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
R20D	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100	R170	Resistor, 11.0 K $\Omega$ , $\pm 1\%$ , 1/4 W	110034-1102
R21	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R171	Resistor, 10.5 K $\Omega$ , $\pm 1\%$ , 1/4 W	110034-1052
R22-R25	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R172	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
R26, R27	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R173	Resistor, 39 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-393
R28-R35	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R174, R175	Resistor, 39.2 K $\Omega$ , $\pm 1\%$ , 1/4 W	110034-3922
R36-R45	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R176	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471
R46	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R178	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470
R47	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	R179, R180	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
R48, R49	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	R181	Resistor, 4.7 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-472
			R184	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103
			R186	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102
			R187, R188	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100

### T-MEK Game PCB Assembly, Continued Parts List

Designator	Description	Part No.	Designator	Description	Part No.
R189	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	RVGND	Resistor, 0 $\Omega$ , $\pm 5\%$ , 1/4 W	110005-001
R190	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103			
R191, R192	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102	SW1	Switch, Slide, SPDT	160040-001
R194	Resistor, 470 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-471	VCR1	Connector, 2 Circuit, Header, .100 Ctr	179048-002
			WDOK	LED, Red, T1-3/4, Diffused, .5MCD, 80-Deg	138021-001
R196	Resistor, 1 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-102			
R202	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470	XIQ2	Resistor, 10 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-100
R204	Resistor, 4.7 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-472			
R205	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470			
R207, R208, R210, R211, R214, R217, R218	Resistor, 10 K $\Omega$ , $\pm 5\%$ , 1/8 W	110027-103			
RMO0-7	Resistor, 47 $\Omega$ , $\pm 5\%$ , 1/8 W	110027-470

## Quad Amp PCB Assembly Parts List

Designator	Description	Part No.	Designator	Description	Part No.
(HS1-HS3) ++1012V1	Screw, Pan, 4-40X3/8, X-Rec, Cad Test Point	172025-3206 179051-001	JCHIN1, JCHIN2	Connector, 11 Ckt, Hdr, .100 Ctr, Key 5	179118-011
AGND1, 2	Test Point	179051-001	JPWR	Connector, 9 Ckt, Header, .156 Ctr, Key 3	179213-009
C1-C6	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	JSPKR1, 2	Connector, 11 Ckt, Hdr, .100 Ctr, Key 3	179118-011
C7	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	L1	Inductor, Ferrite Bead, N12N	141003-005
C8	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	Q1	Integrated Circuit, 78L05	137258-001
C9	Capacitor, .012, 50 V, $\pm$ 10%, Ceramic	122015-123	R1	Resistor, 150 K $\Omega$ , $\pm$ 5%, 1/4 W	110000-154
C10	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R2	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C11	Capacitor, 1000 $\mu$ F, 25 V, Electrolytic, Rad	123024-108	R3	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C12, C13	Capacitor, .33, 50 V, $\pm$ 20%, Ceramic	122026-334	R4, R5	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C14-C19	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R6	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C20	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R7	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C21	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R8	Resistor, 150 K $\Omega$ , $\pm$ 5%, 1/4 W	110000-154
C22	Capacitor, .012, 50 V, $\pm$ 10%, Ceramic	122015-123	R9-R12	Resistor, 158 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1583
C23	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R13-R15	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C24	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R16, R17	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C25-C28	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R18	Resistor, 0 $\Omega$ , $\pm$ 5%, 1/4 W	110005-001
C29	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R19	Resistor, 150 K $\Omega$ , $\pm$ 5%, 1/4 W	110000-154
C30	Capacitor, 100 $\mu$ F, 16 V, Electrolytic, Axial	124008-107	R20	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C31-C34	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R21	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C35	Capacitor, 100 $\mu$ F, 16 V, Electrolytic, Axial	124008-107	R22, R23	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C36-C38	Capacitor, .22 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-224	R24	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C39	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R25	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C40	Capacitor, 100 $\mu$ F, 25 V, Electrolytic	124009-107	R26	Resistor, 150 K $\Omega$ , $\pm$ 5%, 1/4 W	110000-154
C41-C43	Capacitor, 1000 $\mu$ F, 25 V, Electrolytic, Rad	123024-108	R27-R30	Resistor, 158 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1583
C44	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R31-R33	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C45-C47	Capacitor, .22 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-224	R34, R35	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C48	Capacitor, 1000 $\mu$ F, 25 V, Electrolytic, Rad	123024-108	R36	Resistor, 0 $\Omega$ , $\pm$ 5%, 1/4 W	110005-001
C49	Capacitor, .1 $\mu$ F, 50 V, +80%-20%, Cera.	122002-104	R37	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C50	Capacitor, 100 $\mu$ F, 25 V, Electrolytic	124009-107	R38, R39	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C51-C53	Capacitor, 1000 $\mu$ F, 25 V, Electrolytic, Rad	123024-108	R40, R41	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C54-C57	Capacitor, .047 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-473	R42, R43	Resistor, 45.3 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-4532
C58-C61	Capacitor, .22 $\mu$ F, 50 V, $\pm$ 10%, Ceramic	122015-224	R44	Resistor, 11.0 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-1102
C62	Capacitor, 100 $\mu$ F, 25 V, Electrolytic	124009-107	R51-R54	Resistor, 22.6 K $\Omega$ , $\pm$ 1%, 1/4 W	110034-2262
C63-C66	Capacitor, 1000 $\mu$ F, 25 V, Electrolytic, Rad	123024-108	R56, R58, R60, R62	Resistor, 150 K $\Omega$ , $\pm$ 5%, 1/4 W	110000-154
HS1-HS3	Heat Sink, Alum, 2X2X1, 2X4-40	178378-001	(HS1-HS3)	Compound, Thermal	107031-001
IC1-IC3	Integrated Circuit, Quad Op-Amp, LM3403	137673-001			
IC4-IC6	Integrated Circuit, TDA1554	137733-001

# Schematic Diagrams

## INTRODUCTION

**T**HIS CHAPTER contains the schematic diagrams for most of the T-MEK™ game printed-circuit boards, including the game PCB (also called the GT board), the XIO PCB, the Quad Amp PCB, and the Power Distribution  PCB. In addition, this chapter includes wiring diagrams for the entire game and the coin door. The PCB *assembly drawings* are illustrated in Chapter 4, Parts Illustrations.

## NOTES

Thanks M.C. for the loan of the printed manual used to create this.  
Prepared By SJT

This Manual is NOT to be sold.

# Warranty

Seller warrants that its printed-circuit boards and parts thereon are free from defects in material and workmanship under normal use and service for a period of ninety (90) days from date of shipment. Seller warrants that its video displays and laser-video disc players (in games supplied with displays and video-disc players) are free from defects in material and workmanship under normal use and service for a period of thirty (30) days from date of shipment. None of the Seller's other products or parts thereof are warranted.

If the products described in this manual fail to conform to this warranty, Seller's sole liability shall be, at its option, to repair, replace, or credit Buyer's account for such products which are returned to Seller during said warranty period, provided:

- (a) Seller is promptly notified in writing upon discovery by Buyer that said products are defective;
- (b) Such products are returned prepaid to Seller's plant; and
- (c) Seller's examination of said products discloses to Seller's satisfaction that such alleged defects existed and were not caused by accident, misuse, neglect, alteration, improper repair, installation, or improper testing.

In no event shall Seller be liable for loss of profits, loss of use, incidental or consequential damages.

*Except for any express warranty set forth in a written contract between Seller and Buyer which contract supersedes the terms herein, this warranty is expressed in lieu of all other warranties expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose, and of all other obligations or liabilities on the Seller's part, and it neither assumes nor authorizes any other person to assume for the Seller any other liabilities in connection with the sale of products by Seller.*

The use of any non-Atari parts may void your warranty, according to the terms of the warranty. The use of any non-Atari parts may also adversely affect the safety of your game and cause injury to you and others. Be very cautious in using non-Atari-supplied components with our games, in order to ensure your safety.

Atari distributors are independent, being privately owned and operated. In their judgment they may sell parts or accessories other than Atari parts or accessories. Atari Games Corporation cannot be responsible for the quality, suitability or safety of any non-Atari part or any modification including labor which is performed by such distributor.
